

Stable 2 Years Shelf Life Oil Column Asymmetric Hydrogenation Catalyst For 2-Ethylanthraquinone Hydrogenation Reactions

Our Product Introduction

for more products please visit us on jyalumcatalyst.com

Basic Information

- Place of Origin: CHINA
- Brand Name: 2-ethylanthraquinone hydrogenation catalyst
- Model Number: KME-100

Product Specification

- Application: Catalyst For 2-ethylanthraquinone Hydrogenation Reactions
- Density: 0.55 G/cm³
- Storage: Store In Dry Place
- Shelf Life: 2 Years
- Solubility: Insoluble In Water
- Purity: ≥ 98%
- Highlight: **stable acetylene hydrogenation catalyst,
stable asymmetric hydrogenation catalyst,
2-ethylanthraquinone acetylene hydrogenation catalyst**

Product Description

Product Description:

The 2-Ethylanthraquinone Hydrogenation Catalyst contains palladium, which is a highly active metal commonly used in catalytic reactions. The palladium in this catalyst enhances the rate of the hydrogenation reaction, making it more efficient and effective. Applications for the 2-Ethylanthraquinone Hydrogenation Catalyst are numerous, including the production of hydrogen peroxide, anthraquinone dyes, and other organic compounds. The catalyst is particularly useful in the production of hydrogen peroxide, where it is used to convert 2-ethylanthraquinone to 2-ethylanthrahydroquinone, an essential intermediate in the production of hydrogen peroxide. It is recommended to store the 2-Ethylanthraquinone Hydrogenation Catalyst in a dry place to prevent moisture from affecting its performance. The catalyst is a reliable and long-lasting solution for hydrogenation reactions, making it an excellent addition to any laboratory or industrial setting.

Technical Parameters:

Density:	0.55 G/cm3
Application:	Catalyst For 2-ethylanthraquinone Hydrogenation Reactions
Purity:	≥ 98%
Storage:	Store In Dry Place
Solubility:	Insoluble In Water
Shelf Life:	2 Years

Applications:

One common use for this catalyst is in the oil ammonia column, where it can help to improve the efficiency of the hydrogenation process. The KME-100 catalyst is also well-suited for use in oil columns, where it can help to enhance the quality of the final product.

In addition to its versatility, the 2-ethylanthraquinone hydrogenation catalyst also boasts a number of other impressive attributes. It has a density of 0.55 g/cm3, making it easy to handle and transport. It is also insoluble in water, ensuring that it remains effective even in challenging conditions.

When stored in a dry place, this catalyst has a shelf life of two years, meaning that it can be kept on hand for use as needed. And thanks to its use of palladium, the KME-100 catalyst is a reliable and effective choice for a wide range of hydrogenation reactions.

Whether you're working in a laboratory setting or a large-scale industrial operation, the 2-ethylanthraquinone hydrogenation catalyst is the perfect choice for your hydrogenation needs. So why wait? Try it today and experience the difference for yourself!

Customization:

Product Customization Services for 2-ethylanthraquinone hydrogenation catalyst KME-100 from China

Brand Name: 2-ethylanthraquinone hydrogenation catalyst

Model Number: KME-100

Place of Origin: CHINA

Purity: ≥ 98%

Solubility: Insoluble In Water

Shelf Life: 2 Years

Application: Catalyst For 2-ethylanthraquinone Hydrogenation Reactions

Storage: Store In Dry Place

Our product is specifically designed to act as a catalyst for 2-ethylanthraquinone hydrogenation reactions. It has a purity of at least 98% and is insoluble in water. It has a shelf life of 2 years and should be stored in a dry place. Our 2-ethylanthraquinone hydrogenation catalyst is a high quality product that is manufactured in China.

If you are in need of a catalyst for your oil ammonia column or oil column, our 2-ethylanthraquinone hydrogenation catalyst is the perfect solution. Contact us today to learn more about our product customization services.

Support and Services:

The 2-Ethylanthraquinone Hydrogenation Catalyst is a high-performance product that provides excellent catalytic activity for hydrogenation reactions in the production of hydrogen peroxide. Our technical support team is available to provide guidance on product handling, including storage and transportation. We can also assist with troubleshooting and optimizing the catalyst performance to ensure the highest level of efficiency and productivity. Additionally, we offer a range of services to support our customers, such as catalyst testing, analysis, and regeneration. Contact us to learn more about how our product and services can benefit your hydrogen peroxide production process.

Packing and Shipping:

Product Name: 2-Ethylanthraquinone Hydrogenation Catalyst

Package Contents: 25kg drum

Product Description: This catalyst is used in the hydrogenation process of organic chemicals. It is a dark gray powder with high catalytic activity and stability.

Storage: Store in a cool, dry place away from direct sunlight. Keep container tightly sealed when not in use.

Shipping: This product is shipped in compliance with hazardous materials regulations. Please refer to the Safety Data Sheet (SDS) for handling and transportation information.
