

## 2-Ethylanthraquinone Hydrogenation Catalyst Purity 98%

Our Product Introduction

for more products please visit us on [jyalumcatalyst.com](http://jyalumcatalyst.com)

### Basic Information

- Place of Origin: CHINA
- Brand Name: 2-ethylanthraquinone hydrogenation catalyst
- Model Number: KME-100

### Product Specification

- Shelf Life: 2 Years
- Solubility: Insoluble In Water
- Application: Catalyst For 2-ethylanthraquinone Hydrogenation Reactions
- Storage: Store In Dry Place
- Purity:  $\geq 98\%$
- Density: 0.55 G/cm<sup>3</sup>
- Highlight: **98 catalyst for hydrogenation, 98 catalyst h<sub>2</sub>, 2-Ethylanthraquinone catalyst h<sub>2</sub>**

## Product Description

### Product Description:

The 2-Ethylanthraquinone Hydrogenation Catalyst has a wide range of applications, including its use in the oil ammonia column. The catalyst is also used in various hydrogenation reactions, where it plays a crucial role in the process. The catalyst is known for its high efficiency and effectiveness, making it a popular choice among chemists and researchers.

The 2-Ethylanthraquinone Hydrogenation Catalyst is designed to provide excellent results in 2-ethylanthraquinone hydrogenation reactions. The catalyst is easy to use and provides consistent results, making it a reliable choice for chemists and researchers. The product is also known for its durability and stability, ensuring that it remains effective for an extended period.

The 2-Ethylanthraquinone Hydrogenation Catalyst is manufactured using high-quality materials and advanced processes to ensure that it meets the highest standards of quality and purity. The product is rigorously tested to ensure that it meets all the necessary criteria for use as a catalyst in 2-ethylanthraquinone hydrogenation reactions. The product is also carefully packaged to ensure that it remains in excellent condition during storage and transportation.

The 2-Ethylanthraquinone Hydrogenation Catalyst is a crucial component in various industrial processes, including the oil ammonia column and drip ball. Its high efficiency and effectiveness make it an ideal choice for chemists and researchers looking to optimize their processes and achieve better results. Overall, the 2-Ethylanthraquinone Hydrogenation Catalyst is a reliable and effective product that is sure to meet all your hydrogenation needs.

### Features:

Product Name: 2-Ethylanthraquinone Hydrogenation Catalyst

Solubility: Insoluble In Water

Application: Catalyst For 2-ethylanthraquinone Hydrogenation Reactions

Storage: Store In Dry Place

Density: 0.55 G/cm<sup>3</sup>

Shelf Life: 2 Years

This 2-Ethylanthraquinone Hydrogenation Catalyst is an excellent catalyst for hydrogenation reactions of 2-ethylanthraquinone. Its density of 0.55 G/cm<sup>3</sup> makes it easy to work with. The product is insoluble in water and should be stored in a dry place. With a shelf life of 2 years, this catalyst is a reliable choice for your drip ball hydrogenation needs.

### Technical Parameters:

Density	0.55 G/cm <sup>3</sup>
Application	Catalyst For 2-ethylanthraquinone Hydrogenation Reactions
Storage	Store In Dry Place
Purity	≥ 98%
Solubility	Insoluble In Water
Shelf Life	2 Years

This product is a Hydrogenation Catalyst commonly used in Oil column processes that contain Palladium as the active metal.

### Applications:

One of the primary uses of this catalyst is in the hydrogenation of organic compounds. It can be used to catalyze the hydrogenation of a variety of compounds, including palladium. This makes it an ideal choice for those working in the chemical industry.

Another area in which this catalyst is commonly used is in the production of 2-ethylanthraquinone. This compound is used as a raw material in the production of hydrogen peroxide, which is used in a wide variety of applications, including as a bleaching agent, a disinfectant, and a water treatment chemical.

The 2-ethylanthraquinone hydrogenation catalyst is also often used in the oil ammonia column. This column is used to separate ammonia from oil and gas streams, and the catalyst helps to speed up the process, making it more efficient.

Overall, the 2-ethylanthraquinone hydrogenation catalyst is a versatile and high-quality product that is perfect for a range of applications. Whether you are working in the chemical industry, producing hydrogen peroxide, or separating ammonia from oil and gas streams, this catalyst is sure to meet your needs.

### Customization:

**Product Name:** 2-ethylanthraquinone hydrogenation catalyst

**Model Number:** KME-100

**Place of Origin:** CHINA

**Application:** Catalyst for 2-ethylanthraquinone hydrogenation reactions in oil column and oil ammonia column

**Solubility:** Insoluble in water

**Shelf Life:** 2 years

**Purity:** ≥ 98%

**Storage:** Store in dry place

## Support and Services:

The 2-Ethylantraquinone Hydrogenation Catalyst is a high-performance catalyst designed for the hydrogenation of 2-ethylantraquinone in the production of hydrogen peroxide. Our technical support team is available to provide guidance on catalyst selection, reactor design, and process optimization to ensure optimal performance. We also offer catalyst testing and analysis services to help customers optimize their processes and troubleshoot any issues that may arise. Our team of experts is committed to providing excellent customer service and technical support to ensure your success.

## Packing and Shipping:

Product: 2-Ethylantraquinone Hydrogenation Catalyst

Description: This catalyst is used in the process of hydrogenation of 2-ethylantraquinone to produce 2-ethylhydroantraquinone, a key intermediate in the production of hydrogen peroxide.

Packaging: The catalyst is packaged in 25 kg bags made of high-quality, durable materials to ensure the product arrives at its destination in excellent condition.

Shipping: We offer worldwide shipping of our products. The catalyst is shipped in sturdy, well-sealed containers to ensure safe and secure transportation. Our team of experts handles all aspects of shipping to ensure timely delivery and customer satisfaction.
